## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1-5 are allowed.
2. The following is an examiner's statement of reasons for allowance: A level detector comprising two electrical conductors of periodic electro negativity with means for comparing the electrical signal indicative of the current generated by the two conductors in solution to the reference signal and producing a third output electrical signal indicative of whether the current is above or below the desired current level, in combination with all other limitations of the independent claim. And further, a level detector with two electrical conductive elements placed such that a rising solution will contact the surface of both elements, an a means for applying a periodic pulsed electrical energy form a power source to the conductive elements while the current sensor is disabled, in combination with all other limitations of the independent claim, is not disclosed nor deemed obvious in view of the prior art of record. The prior art does not disclosed nor otherwise deem obvious a level sensor with either two conductors of different electro negativity utilizing current measurements or a level detector which applies a periodic pulsed electrical energy while the current sensor is disabled.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
